Translate the question into Spanish. . .Q: Can I configure a SQLite plugin in an xcode project? I am going to make a database application in xcode and I want to use the database created by SQLite(But I don't want to write the code of SQLite again and again so I want to use the SQLite plugins. I googled it and found that a plugin is a.dylib file. But I don't know that if it is possible to use this plugin with xcode(I don't know if it is possible). I want to use only a library written by someone else and let xcode write a code of SQLite with the plugin. Can I use it? if I can't, what other method do you suggest? A: You can't use your own SQLite plugin to create your database. You'll need to use the SQLite command-line tool to create the SQLite database and then copy the file into your application's project (and link it with your application). You might be able to use the open source fmdb.framework to help you with the database file stuff. It is basically a wrapper around SQLite and makes it easier to create the database. You might be interested in using Core Data to create your app's database, instead. There are plenty of tutorials on that too. Vietnam, Indonesia, Argentina, El Salvador and Thailand-Australia. That's not a comprehensive list of countries, which makes the fact that an Australian "Vietnam veteran" is a very real thing, even more puzzling.
