In that case, the setup file's user directory will be written to the registry. A few such installations may work only when run in Command Line. This is the reason why Inno Setup Unpacker Crack Free Download allows you to extract the files from such packages. To run a self-extracting executable file, you need to use an executable program from the system, for example, 7z or WinRAR. However, such programs require the user's consent to run and have to be located on the list of programs. Therefore, you can find it impossible to install such programs when the computer has no administrator access. The program is based on the same principle as 7z or WinRAR but it allows you to run the program without installing it.
