Because Photoshop is so advanced, don't get your hopes up if you want to make money off of selling stock images. In fact, it may be better to get some freelance projects or hire a designer to make you stock images for you. In this book, we show you everything from the basics of pixel manipulation to advanced techniques. We invite you to make that next-level edit. We show you how to use Photoshop's tools to quickly and efficiently edit images. And we show you how to create your own custom images with the power of Photoshop.

Tools to Access The list of tools in Photoshop is vast, and though most Photoshop users never explore all of them, having a working knowledge of the tools listed here will give you an edge. It's important to know that Photoshop has a very steep learning curve. If you want to know what the exact tools are, then you should read the Photoshop CS6 book, which goes into great detail about Photoshop's tools. You can also check out our Photoshop tutorials section on the book's website, and you can refer to the online training videos from Adobe, which can provide a bit of a tutorial for Photoshop's tools and features. Taking just a few minutes to explore the basic tools in Photoshop will help you immensely.

Viewing a Slide Show of Sample Images To see the buttons you'll need to use, to see how to work with the tools, and for some ideas of what can be done with Photoshop, open a file that contains many images in your folder. Go to View⇒Slideshow. Photoshop CS6 looks similar to Figure 2-1 and shows the current slide. You can click on the buttons that appear on the left side of the screen to see how the tools look on the right. When viewing a slideshow, you need to click Play Slideshow or press Space. If the image window is tiny, you can click the image to zoom it in. **Figure 2-1:** Click the buttons on the left to see how they look on the right.

Using the Selection Tool The Selection tool, which is in the top left of the Tools panel, enables you to draw or select an area of pixels in an image. You can use the Selection tool to pick out individual colors, shading, and even shapes. To select an area of pixels in an image, use the shortcut keys: Ctrl+X to select the entire image To move

What's it like? Phasing through an overgrown maze of "lessons", "tutorials", "instruction videos", "how-to-tutorials" and "tooltips", you arrive at a series of walkthroughs, all of which are broken up by a prompt at the top. This prompt varies, and usually includes either an image, some text or a list of image layers. Sometimes it also includes the angle of the sun or some music. You're directed towards a physical dialog between the person teaching and the computer, where the computer tells the user how to perform a given action or edit an existing object. To get the user to perform an action on the image, you're generally given three options: 'Edit' is self-explanatory. 'Draw' allows you to add the instruction in a visible place of the image. This is where the 'design' element of the program comes into play, as it adds the ability to place text, shapes and other objects to the image. 'Photo' can be either 'Transform' or 'Enhance'. In the 'Transform' category, you'll find functions such as: 'Edit' Image 'Enhance' Image These three icons are surrounded by an orange box, which contains six images that you can click to change the action. Some of these icons will have the camera icon next to them, which takes you to a special folder that will have different images – named after the program. When you click the camera icon, you'll be taken to the custom folder. By default this is 'Software', but you can change it to your own custom folder. This camera folder will probably contain different folders, each of which is connected to its own folder, which has its own stock of images that you can click to perform the action. The stock folder is the way to add new actions for things such as gradient fills, text and vector layers. There's no real way to get to the stock folder from where you are, so you're stuck using the program's 'Edit' option. There's no button to click to go back to where you were

PAGES Saturday, 7 December 2011 The 2011 Blogger Photo Challenge - Day 7 It was a good day today and in love with these beauties taken on my journey home from the distillery and the Calligh House Hotel. I'll share these with you in Day 8. Thanks for looking and keep in touch THE CALLIGH HOUSE HOTEL If you haven't seen it already - don't forget to check out my Calligh House Hotel - Part 1 on my A LITTLE OF WALLANDER - Ireland Travel Diary page (here). 24 comments: Wow, congrats on the photo challenge, Heather. Your images are stunning. (And, I'm so sorry you've been sick!) I love the way you mentioned the Calligh House Hotel, because I just visited there yesterday. It's very relaxing! Heather - Thank you so much, I really appreciate the kind words on my A Little of Wallander Ireland Travel Diary post. I must admit, I'm still reeling from the wonderful time I've had, but it's that time of year when I'm always exhausted - hence the rain delay post and feeling a little under the weather. I will post a Day 8 post later tonight - I actually find it a bit easier in the office once the office coffee's sorted - and the rest of the day goes better for me. Thank you, again, for being so generous in sharing your Irish Diary with us. I am here at work, as I write this, reliving a day so enjoyable I could cry - and enjoying being with lovely people whom I would not normally get to meet. The Calligh House was a great place to stay and it was a great day. Now all I need to do is settle down with a cup of tea in a comfy chair and get back on with some of my work.... thanks for taking the time to comment, have a lovely day :-) You are a wonderful photographer Heather. I'm so sorry you were not feeling well when I last saw you. I hope you feel much better. To be honest, as a photographer you're a very hard person to say no too. I bet you had lots of fun and were even inspired by your pictures. I love the Calligh house pictures. Isn't it lovely? Thank you, Marie, for your lovely comments. I did have a great time in Ireland, thanks to you. I'm so glad you

Q: How do I get a badge for an answer I thought would be valid? Just a couple of hours ago I posted an answer to this question. I felt I was pretty confident that, based on the information available to me in the original question, that the question was somewhat inaccurate. It might have been a little difficult to get down to the nitty-gritty (I've never done the work but only done practical experiments) but I thought the answer was at least correct in principle. That however does not seem to be the conclusion of the "resolve" function. Is this supposed to be like a sort of "Quality First" badge? I actually just voted on the question, so can the "resolve" link actually get it wrong? P.S. This is the badge that popped up on my screen after the vote: A: Presumably the "resolve" link is working correctly, and the upvotes are enough to trigger the badge. I don't know why the "quality gold" badge is not popping up as well. Update: I just went to the badge page (as I'm sure you did) and found that there are two badges for this. Quality and quality gold. Quality, of course, is exactly what you had, and gold is for having that badge. DESCRIPTION (Investigator's Abstract): Infection with herpes simplex virus-1 (HSV-1) results in a viral disease, cold sores, and a range of neurologic and psychiatric sequelae. Studies in our laboratory have focused on the mechanism of immune-mediated modulation of virulence, particularly of the motor end organ, the trigeminal ganglion (TG). We have shown that interferons, human serum components and pharmacologic agents modulate viral pathogenesis in mice to make them more susceptible to infection with the neurovirulent host range mutants of HSV-1. This project is focused on the mechanism by which these agents modulate neurovirulence. These studies will seek to elucidate the most important host defense factors involved in the modulation of neurovirulence. The goal of this line of research is to provide the foundation for understanding the determinants of neurovirulence and develop novel treatments for the infection of the nervous system. Understanding how the host response regulates neurovirulence would provide the knowledge necessary for the development of new approaches for prevention and treatment of life-
