written in C/C++, and has been updated over a period of several years, at the present time has over 150 different functions, and supports dynamic loading. What more is there? Well, let's check the list of users to see if you are looking for the software to be used as a text editor: - Rich text editors like AbiWord and OpenOffice Writer. However, they are not free, but have a steep learning curve and might be too complex for simple needs. - Emacs, an enhanced text editor. It is powerful, very powerful, and can be used to write all sorts of complex, even huge files, but is also extremely complex to use, and has a steep learning curve. - WYSIWYG editors like DreamWeaver. These are often very complex, with added features. However, editing HTML is pretty easy. DreamWeaver is not free, but many universities are using it, especially in the United States. - WinEdt. It is one of the best text editors, and is free. It is especially useful when you do not want to work with HTML. It was developed by a single person, who published it to the public domain, there are some independent modifications, and an active community of developers make improvements and new versions. WinEdt is considered to be almost a multi-platform version of MS Word. In short, you have choice. Where should you start looking? Well, WinEdt is a very good option, and the only one I would consider free, WinEdt
