ABI-C ABI-C is the programming language developed by Autodesk to ease the development of add-on applications (Plugins) for AutoCAD, and to support object-oriented programming in the Visual LISP environment of the AutoCAD application. However, ABI-C does not provide a way to program the user interface (UI). ABI-C is also based on AutoLISP. The two languages are not compatible and are two different programming languages. The common programming language between the two is Visual LISP. ABI-C is an object-oriented programming language using Class and Inheritance, with some syntax and data types that resemble those of Java. ABI-C does not use prototypes; methods are defined as free functions (i.e., local functions) within the program, and are automatically declared within the class definition. The only alternative to ABI-C and Visual LISP are AutoLISP and VBA, respectively. ABI-C is available for the following operating systems: See also List of AutoCAD plug-ins References External links The ABI-C website The Autodesk Exchange website The Visual LISP website Category:Autodesk Category:Autodesk software Category:Application programming interfaces Category:Computer programming tools Category:Lisp programming language familyAlbania: "The State had a duty to inform...
