Photoshop Elements The free program is available for Macs, Windows, and Linux. Like its cousin Photoshop, Photoshop Elements lets you make changes to both raster and vector images, allowing you to make more sophisticated changes to a file than you can with a regular, consumer-level program. To access and create new files, choose Photoshop Elements from the Applications menu and then press the Windows key on your keyboard or click the icon of a folder in Windows Explorer or the Macintosh equivalent. The main Elements window, shown in Figure 3-12, contains four main panels: \* \*\*Quick Fix panel:\*\* This window is used to access Photoshop Elements' 18 modules – such as Color, Smart Objects, and the Adjustment Brush – and three dozen new ones for reshaping an image, cropping and rotating, and organizing images. You can also search for a file using the new File Search window. \* \*\*Hand tool:\*\* Drag the Hand tool from the Tools panel on the right side of the application window and use it to draw around areas of the image that you want to remove, duplicate, or edit. Click the arrow at the top of the Hand tool to bring up a menu. Click the up or down menu and choose `_Edit Contents._` Use the Hand tool to draw around areas of your image that you want to edit. \* \*\*Layers panel:\*\* Click any thumbnail image to open a small window with a list of all the images in your image file. Click any thumbnail image to open a full window with a list of all images in your image file. You can then select the ones you want to keep (by either highlighting them or pressing the A key) and delete the ones you don't want (by pressing the Delete key). \* \*\*Slide Show panel:\*\* Use this panel to display thumbnails of your images as a slide show. Choose a thumbnail and press the space bar to open the window full screen. In this window, you can choose your transition effects, create a Custom Slide Show, and add background music. Figure 3-12: The main Elements window holds the tools that you use to manipulate your images. If you don't want to lose any changes that you make to a file, use the Undo command on the keyboard to reverse the changes

Q: R - Calculate slope of a function from matrices I have two matrices, A and B, of dimensions 3x3. I want to calculate the slope, m, of a plane, given by the points (x,y) in matrix A, that passes through the point (0,0) and is perpendicular to the line through (1,0), (0,1). for loop. A: Take the cross product between the vectors  $(1, 0)$  and  $(0, 1)$  to get a vector perpendicular to both  $(1, 0)$  and  $(0, 1)$ . Divide it by  $\text{length}(1, 0)$  to get a unit vector. From there, all you have to do is normalize the vector and add the two vectors together to get the slope.

Russian President Vladimir Putin is a pretty busy man these days: he's simultaneously worrying the Western world by advancing his country's interests abroad, and the Russian people by denying them decent health care. And then there's the president's taste in art, if we're to judge by his portrait collection, which includes six reproductions of Soviet-era paintings depicting Russian explorers and adventure racers. Standing in front of a brightly-colored portrait by Anna Kostrova depicting Dmitry Lopukhin in the extreme conditions of the Arctic Circle, as his team attempts to plant a Russian flag in a frozen hole, Putin's press secretary Dmitri Peskov seems a little bit put out that people don't appreciate his leader's interest in extreme sports. "He owns a lot of art works but he keeps them in his private space," Peskov told reporters at a briefing, as he was shown one of Lopukhin's paintings by a reporter. "They're very beautiful works, very high-quality ones." To be fair, some of the paintings are not all that good; I've taken a look at a few of them and a few of them are fun, but a little bit dry. And they're not supposed to be the star of the show, just a little informative context. Still, they're some of the nicest souvenirs you could ask for
