Autodesk File Exchange. The Autodesk File Exchange is an online tool for creating and sharing files. Autodesk Exchange Apps. Software on Autodesk Exchange apps provide AutoCAD-based products. Autodesk Technology Network. The Autodesk Technology Network is a unified, technology-driven community for building innovative software. CAD analytics Analyzing drawings and data from CAD files can be done for a variety of purposes, such as: to meet the needs of the design and manufacturing industries, to support specific goals, such as rapid response to customers and regulatory agencies to support specific goals, such as improving safety and quality of products to support specific goals, such as training and education to address specific needs, such as recovering from a catastrophic event and overcoming lost data to support efficient use of CAD resources CAD analytics software usually combines information retrieval, data analysis and presentation. Examples of data analysis and presentation include: taking the CAD drawings and data, which have been imported, saved and grouped into classes, and identifying which group should receive attention identifying critical paths for a product or process creating Gantt charts for project schedules, so that those involved can understand current and future status providing data tables, so that groups can understand where their products fit into the overall plan for a product enabling users to perform searches and make selections of specific data from a large amount of data enabling the selection of information for presentation to people in different roles in a group displaying data on a Web page or on a dashboard See also Comparison of CAD editors for architecture and design Comparison of CAD editors for manufacturing Comparison of CAD editors for portable/embedded systems Comparison of CAD editors for mechanical engineering Comparison of CAD editors for reverse engineering References External links CAD Automation and Interaction: What CAD Users Need to Know, B.
