FIFA Ultimate Team Challenges “As we enter our 22nd year, we are proud to enhance the incredible gameplay of FIFA Ultimate Team with support for our most powerful player classes, the addition of more weaponry and armor, and a wide variety of new game modes,” said Aaron McHardy, Creative Director, FIFA. Movement and the Virtual Ball Last year, we introduced FIFA Ultimate Team (FUT) Challenges, which included the addition of the ability to use player creative insights to build custom cards. This year, the goal has evolved to give fans more opportunities to flex their creative muscles through the introduction of a new suite of game modes that utilize the power of game physics and player data. As part of this evolution, the introduction of hyper-powered hardware, created in partnership with Intel®, which enables us to capture data from actual players in motion, will give us incredible data with which to create more hyper-powered cards. HyperMotion Technology: We’ve taken a journey into game physics to bring a deeper layer of game intelligence to help you make unique virtual players. In the next step, we’ve combined these elements with Player Data to enable you to experience a new level of virtual player creation. Using this data, we’ve developed the ability to fine-tune the physical properties of a player based on its attributes. This is enabled through the use of "HyperMotion Technology," which collects data from 22 real-life players playing a complete, high-intensity football match. The data captured from these players' movements, tackles, aerial duels and on-ball actions is used to power the gameplay of FIFA 22. Challenge Modes In addition to adding more cards, badges and coins to FUT Challenges (see below), we’re also adding two new modes: Vitality. This mode involves two teams competing to score goals while opponents try to defend against them. The game is controlled by a set of in-game rules. The teams’ goalkeepers, defenders, midfielders and forwards can use a unique set of skills to score and defend against goals. These include shielding with the virtual ball, countering by feinting with the ball, and aiming the virtual ball. Rotating Pass. In this mode, players are tasked

CONTROLS The global media and worldwide online community of fans have been vocal in criticising the new FIFA as not being as good as last year's title, FIFA 19. The main complaint is that FIFA 20 is very similar to FIFA 19 in how it plays, and that it is difficult to improve from last year's title. This is to an extent true, but the highlight of FIFA 20 is the new ball physics engine. With the new ball physics, you will be able to tell if the ball is gonna be used in a header or a dribble. The new ball physics can be seen in the following GIFs. The ball is able to move in multiple directions, whether a player is heading the ball or powering through, the ball will always take the right direction. This is accomplished by having a golf-like spin on the ball. The weight of the ball has been increased, which impacts dribbling, headers, passes and more. On a much smaller scale, the ball is also affected by every player on the field. This means that no player can be left out of a pass, and that touch and vision cannot be completely thrown off by the players. Other new features include the addition of new player behaviour, and an all-new animation system. The player balance for FIFA 20 is subject to change. FIFA 20 will be released on October 27, 2019. For more information about FIFA 20 and any other FIFA games, check out the FIFA website. Skylar (film)
